User Access Management - Case Scenario

Background:
You are working for a medium-sized enterprise with multiple departments and a growing workforce. Your company is currently facing challenges in managing user access to its IT resources efficiently and securely. To address these challenges, the IT department takes the decision to implement a **User Access Management (UAM) process** using Active Directory (AD) and a role-based security group model.

Task Definition:
Describe your vision for the overall implementation of the process, listing all the steps you consider mandatory for the success of the project.
List the main benefits that result from the process implementation.
